

June 3, 2017

To my Explorer users:

Please send me your email if you would like to be on my mailing list.

Many of my users are doing test development using ordered, Likert-type scales. With bootstrapped standard errors now available, I have little problem with factoring your data using ordinary least-squares and obtaining non-parametric standard errors, which are consistent without making any distributional assumptions. If you have an opinion on this, or questions about Explorer—or if you want to report any errors you have discovered—please feel free to email me with that information. I would greatly appreciate hearing of any such problems you may encounter.

Sincerely,
-Jim Fleming
